## New Features

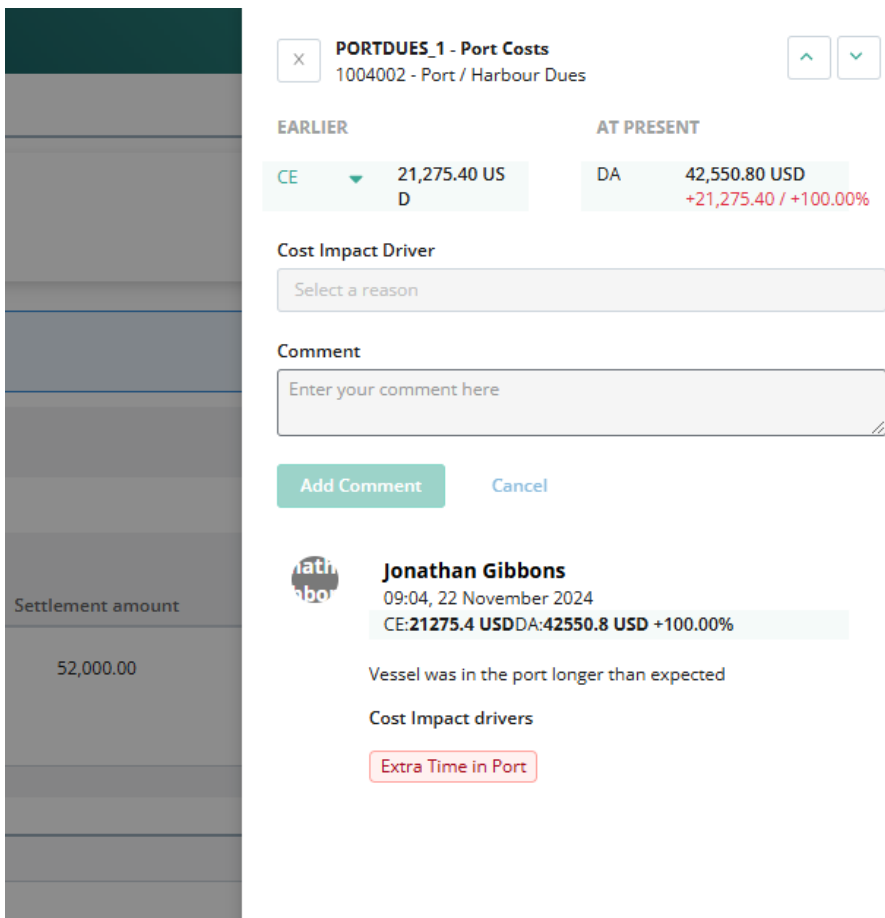

### ➤ Calculation explainer (cost impact drivers)

#### Challenge:

As a principal user, you may have had trouble understanding the reasons behind price increases or decreases in service costs throughout the DA process. This lack of explanation often led to confusion and additional queries about why there were fluctuations in service charges. You were unable to view additional comments from the Hub explaining the reason behind cost changes across different financial stages, limiting visibility into cost adjustments.

#### Functional enhancement and benefit:

You will now have clearer visibility into the reasons for any cost variances at different finance stages. When you view a service line, you'll be able to see an explanation for price changes by clicking the "Variance" details button. This will open a side drawer where the vendor can provide a detailed cost impact driver and supporting comments. This enhancement ensures greater transparency and reduces the need for follow-up inquiries, helping you better understand the reasons behind service cost changes.

The screenshot displays a side drawer for a service line titled "PORTDUES\_1 - Port Costs" (ID: 1004002 - Port / Harbour Dues). It compares costs between two stages: "EARLIER" and "AT PRESENT".

Stage	Code	Amount
EARLIER	CE	21,275.40 US D
AT PRESENT	DA	42,550.80 USD
		+21,275.40 / +100.00%

Below the comparison, there is a "Cost Impact Driver" section with a dropdown menu set to "Select a reason". A "Comment" section contains a text area with the placeholder "Enter your comment here".

At the bottom, there are "Add Comment" and "Cancel" buttons. A user comment from Jonathan Gibbons (dated 09:04, 22 November 2024) is visible, stating: "CE:21275.4 USDDA:42550.8 USD +100.00%". The comment text reads: "Vessel was in the port longer than expected". Underneath, the "Cost Impact drivers" section lists "Extra Time in Port" as the reason.

On the left side of the drawer, a "Settlement amount" of 52,000.00 is visible.
